

# UE Bio-targeted chemistry 1

Niveau d'étude  
Bac +5

ECTS  
3 crédits

Composante  
UFR Chimie-  
Biologie

Période de  
l'année  
Toute l'année

- › **Langue(s) d'enseignement:** Anglais
- › **Ouvert aux étudiants en échange:** Oui
- › **Code d'export Apogée:** YACB9U40

## Présentation

### Description

Course outline:

This course describes synthetic approaches and methods for: the synthesis of library of small[1]molecules, the assembly of peptide and analogs, the engineering of molecular conjugates of biomolecules, and the applications of that family of molecules in therapeutics, diagnostics and nanotechnologies (i.e. biosensors).

Details:

I/ Peptides and protein engineering

I.I.Structural aspects

II.Synthetic strategies (SPPS, fragment synthesis, native ligation)

III.Applications in vectorization (Monoclonal antibodies, cell-penetrating peptides, peptide ligands, nanoparticles)

IV.Antimicrobial peptides, toxins

V.Pseudopeptides

## 2/ Chemical ligation

I. The different reactions

II. Multiple chemoselective ligations

III. Installing bioorthogonal functionality into target biomolecules

IV. In vivo click chemistry

## 3/ Combinatorial chemistry

I. Drug Discovery

II. Synthetic strategies (combinatorial vs parallel synthesis; solid vs supported synthesis)

III. Dynamic Combinatorial Chemistry / Target guided synthesis

## 4/ Biosensors

I. Medicinal, environment and food safety applications

II. Biomolecules for molecular recognition

III. Chemical modifications for immobilization and transduction

---

## Heures d'enseignement

UE Bio-targeted chemistry 1 - CM	CM	20h
----------------------------------	----	-----

---

## Pré-requis recommandés

Prerequisites: Organic chemistry, Peptide synthesis (M1 Master Program CHI703, CHI832).

**Période :** Semestre 9

---

## Compétences visées

Skills:

Chemical methods for ligations of complex biomolecules (peptides, oligonucleotides and carbohydrates), applications in biosensor. Combinatorial chemistry: principles / techniques/ applications. Reactivity, synthetic methods and applications of peptides.
