

UE Experimental techniques and methods 1

Level
Baccalaureate
+4

ECTS
3 credits

Component
UFR PhITEM
(physique,
ingénierie, terre,
environnement,
mécanique)

Semester
Automne

- > **Teaching language(s):** English
- > **Open to exchange students:** Yes
- > **Code d'export Apogée:** PAX7MEAD

Presentation

Description

The aim of this first part is to learn the principles of measurements of static and dynamic response of solid material and structures, and carry out the analysis of results: (i) Force and displacement measurements (type, performance and uses to perform standard experiments), (ii) full field measurement of displacement using 2D and 3D images (images acquisition, treatment and digital images correlation). All these techniques and methods are illustrated through experimental set ups available in research labs.

Course parts

UE Experimental techniques and methods 1 - CMTD

Lectures (CM) & Teaching Unit (UE)

24h

Period : Semester 7
