

# UE High throughput biology

Component  
UFR Chimie-  
Biologie

- > **Teaching language(s):** English
- > **Open to exchange students:** Yes
- > **Code d'export Apogée:** YAX9BI37

## Presentation

### Description

#### Course outline

The lectures present the basic methodology and some advanced techniques used for high throughput *in vitro* small molecule drug discovery. The principles and statistical methods used for assay optimization and validation will also be explained.

- I. Molecular biology, Biochemistry and Protein expression
- II. Proteomic analysis; Mass spectrometry
- III. Lab-chips and Cell-chips
- IV. Structural biology: Crystallogenesis and Crystallization; RMN
- V. Combinatory chemistry

**Format of exams:** Oral exam (at the end of December) and Research project (at the beginning of January)

---

## Course parts

UE High throughput biology - TD	Tutorials (TD)	10h
UE High throughput biology - CM	Lectures (CM)	30h

---

## Recommended prerequisites

Background in biochemistry, molecular biology and cellular biology. Knowledge in physiology, immunology and microbiology will be appreciated. Students with laboratory and/or practical skills will better understand technological benefits of the use of high throughput technologies in the lab work.

**Period :** Semester 9

## Useful info
