Presentation

Description

This course is an introductory course on numerical field computation using the finite difference and the finite element methods.

Content:

- Finite difference method.
- Finite element method:
 - Strong and weak formulations.
 - Finite element analysis : domain discretization, local and global interpolation, numerical integration, assembly, resolution of linear system, etc.

Course parts

UE Introduction to numerical field computation - CM/TD	Lectures (CM) & Teaching Unit (UE)	16h
UE Introduction to numerical field computation - TP	Practical work (TP)	12h

Recommended prerequisites

Familiarity with the following content of the course "Numerical Methods" :

- Approximation and interpolation.
- Numerical integration.
- Numerical linear algebra:
 - Fast linear solvers (direct and iterative).
 - Fast eigen-solvers.
