

UE Driving Experimentation in Biology

ECTS
18 crédits

Composante
UFR Chimie-
Biologie

- **Langue(s) d'enseignement:** Anglais, Français
- **Ouvert aux étudiants en échange:** Non

Présentation

Description

This module is based on a project-based pedagogy. Its main objective is to learn how to **design, perform and interpret** experiments. This module develops many personal and professional skills such as reasoning expertise, analysis ability, creativity, adaptation and curiosity. It also gives students the opportunity to learn how to **communicate around their scientific results and**

to argue their experimental choices. Beyond this main objective, this module provides an **integrated and transdisciplinary vision of biology** and allows students to break down the barriers of disciplinary learning and to give sense to their academic knowledge. To achieve these goals, we have set up a creative pedagogy based on the use of varied and innovative strategies.

Tutoring sessions (around 3h/student) will help you to define your project, to formulate hypotheses and to design the experimental strategy. The experiments will be planned according to each project and performed during 3 weeks of practical courses.

Heures d'enseignement

UE Driving Experimentation in Biology - CM	CM	3h
UE Driving Experimentation in Biology - TP	TP	150h
Période : Semestre 7
