

UE Petrology

 **ECTS**
6 credits

 **Component**
UFR PhITEM
(physique,
ingénierie, terre,
environnement,
mécanique)

 **Semester**
Automne

- > **Teaching language(s):** English
- > **Open to exchange students:** Yes
- > **Code d'export Apogée:** PAX7SRAF

Presentation

Description

Description and quantification of the processes that manage magmatic and metamorphic petrology Fractional crystallization - example of large bedded intrusions; Partial melting - trapps and oceanic plateaus; Assimilation, mixing of magmas - magmatic deposits; Basalts from oceanic ridges and oceanic islands; Volcanic rocks of subduction zones; Composition and structure of continental crust; Transformation processes of metamorphic rocks; Metamorphic rocks and their geodynamic context; Metamorphic facies and reconstruction of pressure-temperature conditions; Dating of metamorphic rocks; Alpine metamorphism.

This course is given in English.
