Présentation

Description

This course is aimed to introduce students to planning and communication strategies in science. The content includes critical analysis of scientific articles, planning of scientific projects, and strategies for oral communication of scientific results. The students will prepare and present 2 oral presentations, one of 10 minutes and one of 180 seconds. The presentations will be based on the critical analysis of a scientific project and articles. The course planning includes sufficient periods of private work to prepare these presentations. The students will participate in the grading of these presentations, with the aim to reinforce active participation in processes of analyzing and communicating scientific results. Assessment of the course will be made during tutorial classes.
